HYDRAULICS & PNEUMATICS 1985 Editorial Index

Out-of-print copies are available in complete volumes from University Microfilms, 300 N. Zeeb Rd., Ann Arbor, MI 48103, 313/761-4700.

	Month	Page
Basic technology		
Air logic, R. Culbertson		
Chapter 1: Control systems	Jan	122
Chapter 2: Applications for air logic controls	Feb	60
Chapter 3: Effective use of air logic control	Mar	48
Chapter 4: Basic logic	Apr	93
Chapter 5: Communication	May	68
Chapter 6: Boolean Algebra	Jun	54
Chapter 7: Memory functions	Jul	54
Chapter 8: Time delays	Aug	109
Chapter 9: Amplifiers	Sep	66
Chapter 10: Counters	Oct	66
Chapter 11: Specialty hardware	Nov	83
Chapter 12: Thought provoking circuits	Dec	39
Analyzing hydraulic systems through computer integration, F. Kinoglu, D. Riley and M. Donath	Nov	88
Basics of compressed air filtration, R.T. Schneider	Nov	60
Dirt capacity: the misused filter selection factor, L.E. Bensch, Ph.D., P.E.	Nov	55
Extra instrumentation can cut compressor operating costs, N.H. Robson	Sep	86
HWCFs revisited, C. Berth	Feb	57
Noise analysis and control in fluid power systems, H.R. Martin		
Part 7: Circuit related noise problems -- lumped and distributive pipe models	Jan	119
Novel, closed hydraulic system follows the sun	Dec	10
Pressure gages: a look at what's inside	May	60
Primer and guide to hydraulic fluids, S.G. Miller		
Part 1. Basics you should know about viscosity, viscosity index, and oxidation resistance	Sep	83
Sharp EL512 calculator helps size accumulators, W.T. Flippo		
Part 1. Supplementing pump flow, auxiliary power source, energy storage, holding pressure, and leakage compensation	Aug	106
Part 2. Shock suppression	Sep	70
Why doesn't everyone use electronic controls?, R.W. Henke	Jun	51
Books, education, and training		
Air logic, R. Culbertson		
Chapter 1: Control systems	Jan	122
Chapter 2: Applications for air logic controls	Feb	60
Chapter 3: Effective use of air logic control	Mar	48
Chapter 4: Basic logic	Apr	93
Chapter 5: Communication	May	68
Chapter 6: Boolean Algebra	Jun	54
Chapter 7: Memory functions	Jul	54
Chapter 8: Time delays	Aug	109
Chapter 9: Amplifiers	Sep	66
Chapter 10: Counters	Oct	66
Chapter 11: Specialty hardware	Nov	83
Chapter 12: Thought provoking circuits	Dec	39
Dirt capacity: the misused filter selection factor, L.E. Bensch, Ph.D., P.E.	Nov	55
Electronics command water-powered robot	Aug	14
Flow-pressure drop equation simplifies pneumatic design, E. Hagstrom	Oct	74
Fluid Power Education Update		
Iowa State University--prepares its students to handle any phase of hydraulic design and maintenance on farm and industrial equipment	Jan	316
Hydraulic training at Dana turns participation into professionalism	Feb	92
Northampton County Area Community College--successful joint venture of fluid power education between a community college and one of its industrial neighbors	Mar	68
Milwaukee School of Engineering keeps fluid power in the mainstream	Apr	102
Vickers Inc.--Technical training center is geared to high-tech hydraulics	May	79
Oklahoma State University--31 years of fluid power research and education	Jun	104
Parker Hannifin Corp., Fluidpower Group--Involvement Training meets more than basic needs for customers, Parker personnel	Jul	66
Granite Falls Area Vocational-Technical Institute--specialized, job-oriented fluid power technology gets results	Aug	122
High or low voltage can affect electric motor performance	Jul	10
Microelectronic control of hydraulic systems, R.W. Henke		
Part 1. Trends toward using microprocessors and microcomputers	Mar	45
Part 2. The machine cycle and cycle profile analysis	May	57
Part 3. Interfacing functions of sensors/transducers	Sep	72
Sharp EL512 calculator helps size accumulators, W.T. Flippo		
Part 1. Supplementing pump flow, auxiliary power source, energy storage, holding pressure, and leakage compensation	Aug	106
Part 2. Shock suppression	Sep	70
Software shrinks design time, R.O. Hayes	Jul	50
Understanding pressure-compensated pumps, R.W. Henke	Nov	80
Circuit and system design		
Accumulator pairs smooths robot operation	May	14
Air-operated valves control hydraulic log stacker, W.R. Macnab and F. Keagbine	Sep	59
Analyzing hydraulic systems through computer integration, F. Kinoglu, D. Riley and M. Donath	Nov	88
Compressed air helps plant vegetables, G.L. Branch	Oct	52
Flow-pressure drop equation simplifies pneumatic design, E. Hagstrom	Oct	74
Hydraulic controls help to pave the way, R. Landl and C.E. Gullan	Feb	53

1985 Editorial Index

	Month	Page
Hydraulic redesign improves machine productivity, T.K. Virvalo	Nov	77
Hydrostatic transmissions drive automotive assembly lines, R.E. Dauch	Oct	45
Microelectronic control of hydraulic systems, R.W. Henke		
Part 1. Trends toward using microprocessors and microcomputers	Mar	45
Part 2. The machine cycle and cycle profile analysis	May	57
Part 3. Interfacing functions of sensors/transducers	Sep	72
Multi-pump design regulates machine speeds, P.J. Devine	Jun	47
Noise analysis and control in fluid power systems, H.R. Martin		
Part 7: Circuit related noise problems – lumped and distributive pipe models	Jan	119
Novel, closed hydraulic system follows the sun	Dec	10
Power summation improves versatility of hydraulic system	Sep	64
Software shrinks design time, R.O. Hayes	Jul	50

Control systems and equipment

Electrohydraulic pump controls: a technology enhancer, R.H. Atkinson	Jun	61
Hydraulic redesign improves machine productivity, T.K. Virvalo	Nov	77
Hydraulics keeps hillside harvester level, M.K. Wyffels	Sep	62
Manifold-mounted filter protects saw's servo system	Nov	14
Microcomputers automate tractor steering, B.R. Tennes and B.R. Murphy	Mar	52
Microelectronic control of hydraulic systems, R.W. Henke		
Part 1. Trends toward using microprocessors and microcomputers	Mar	45
Part 2. The machine cycle and cycle profile analysis	May	57
Part 3. Interfacing functions of sensors/transducers	Sep	72
Multi-pump regulates machine speeds, P.J. Devine	Jun	47
Pump controls finesse brute force design, A. Bagat and P. Orban	May	53
Pump controls protect waste shredder economically	Jun	14
Responsive, compact hydraulics control remotely operated vehicle, A.B. Billet	Dec	31
Why doesn't everyone use electronic controls?, R.W. Henke	Jun	51

Cylinders, shock absorbers, and intensifiers

All cylinders are not created equal	Oct	56
Eight cylinders raise hovercraft for service, S. Debruyne	Oct	49
Novel, closed hydraulic system follows the sun	Dec	10
Special tubing finishes aid cylinder production	Mar	12

Electric/electronic components

Analyzing hydraulic systems through computer integration, F. Kinoglu, D. Riley and M. Donath	Nov	88
Eight cylinders raise hovercraft for service, S. Debruyne	Oct	49
Electrohydraulic pump controls: a technology enhancer, R.H. Atkinson	Jun	61
Electronics command water-powered robot	Aug	14
High or low voltage can affect electric motor performance	Jul	10
Hydraulics keeps hillside harvester level, M.K. Wyffels	Sep	62
Hydrostatic transmissions drive automotive assembly lines, R.E. Dauch	Oct	45
Portable analyzer gives fast digital pressure readings	Oct	14
Sharp EL512 calculator helps size accumulators, W.T. Flippo		
Part 1. Supplementing pump flow, auxiliary power source, energy storage, holding pressure, and leakage compensation	Aug	106
Part 2. Shock suppression	Sep	70
Software shrinks design time, R.O. Hayes	Jul	50
Why doesn't everyone use electronic controls?, R.W. Henke	Jun	51

Fluid logic

Air logic, R. Culbertson		
Chapter 1: Control systems	Jan	122
Chapter 2: Applications for air logic controls	Feb	60
Chapter 3: Effective use of air logic control	Mar	48
Chapter 4: Basic logic	Apr	93

Chapter 9: Amplifiers	Sep	66
Chapter 10: Counters	Oct	66
Chapter 11: Specialty hardware	Nov	83
Chapter 12: Thought provoking circuits	Dec	39

Fluids and fluid conditioners

Basics of compressed air filtration, R.T. Schneider	Nov	60
Dirt capacity: the misused filter selection factor, L.E. Bensch, Ph.D., P.E.	Nov	55
HWCFs revisited, C. Berth	Feb	57
Manifold-mounted filter protects saw's servo system	Nov	14
Oil reclamation program slashes replacement costs	Feb	12
Primer and guide to hydraulic fluids, S.G. Miller		
Part 1. Basics you should know about viscosity, viscosity index, and oxidation resistance	Sep	83

Fluid power education update

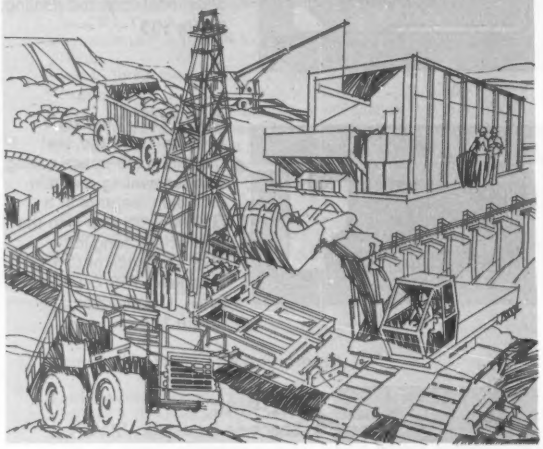
Fluid Power Education Update		
Iowa State University–prepares its students to handle any phase of hydraulic design and maintenance on farm and industrial equipment	Jan	316
Hydraulic training at Dana turns participation into professionalism	Feb	92
Northampton County Area Community College–successful joint venture of fluid power education between a community college and one of its industrial neighbors	Mar	68
Milwaukee School of Engineering keeps fluid power in the mainstream	Apr	102
Vickers Inc.–Technical training center is geared to high-tech hydraulics	May	79
Oklahoma State University–31 years of fluid power research and education	Jun	104
Parker Hannifin Corp., Fluidpower Group–Involvement Training meets more than basic needs for customers, Parker personnel	Jul	66
Granite Falls Area Vocational-Technical Institute–specialized, job-oriented fluid power technology gets results	Aug	122

Hydraulic components and equipment

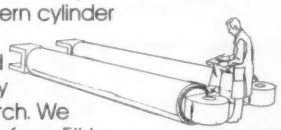
All cylinders are not created equal	Oct	56
Derricks hoist hefty weights, N.M. Clifford	Jul	45
Directional control valves for profit-making designs		
Fundamentals	Apr	50
Servovalves	Apr	58
What you always wanted to know about servovalves and their applications, R.V. Burton	Apr	64
Electrohydraulic proportional control valves, R.W. Henke	Apr	68
Hydraulic pavement breaker uses vibration, not impact	Sep	12
Pressure gages: a look at what's inside	May	60
Small vehicle transaxle integral HST	Jan	12
Special tubing finishes aid cylinder production	Mar	12

HYDRAULIC CYLINDERS

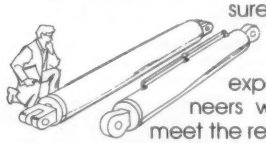
Custom built to your specifications



For over 40 years Victor Fluid Power has supplied precision-built custom cylinders for oil fields, construction, mining, marine and solid waste applications. Victor offers the capabilities of one of America's most modern cylinder manufacturers. We have the facilities and experience not many other plants can match. We specialize in cylinders from 5" to 36" bore and strokes limited only by your design. Large bore, long stroke, telescoping, high pressure – up to 10,000 psi.



We will build to your specifications... or experienced Victor engineers will design cylinders to meet the requirements of your job. Check with Victor when you need big or complex cylinders. We want your problems (including rebuilding of large bore cylinders).



For detailed information, write or call Victor Fluid Power, Granite Falls, MN 56241, (612) 564-2311 and ask for Bulletin V-200-1184.

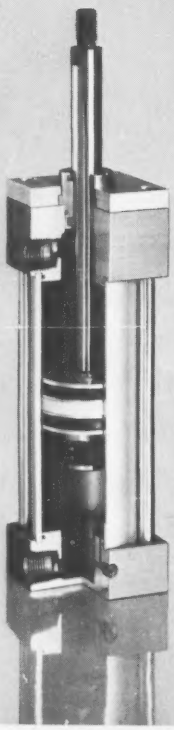
The Aluminum Alternative



High Productivity Lower Cost

AAC aluminum cylinders will perform as well as steel bodied cylinders at air and low pressure hydraulics. Save up to 40% of the cost of steel 2500 p.s.i. cylinders. AAC's aluminum tubes exceed the cycle life of chrome-plated steel tubes by 300%!

The use of a special nylon bearing strip on the piston also allows AAC cylinders to outlast other aluminum bodied cylinders. Available in NFPA Series "I"; Economy Series "B" and Roundline Series "R". Request a free full-line catalog today.

FACT: More engineers specify ACE shock absorbers than any other brand!

"Quality product that lasts"
"Service is outstanding"
"They do the job"

Those reasons are most often given by engineers for specifying one of the almost 50 standard ACE shock absorbers currently available. And they get technical and computer-based assistance from stocking distributors worldwide. Technical Brochure ASP-9 details it all.
